DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by E. L. White (U.S. 1,154,358).

White ('358) discloses a device for suspending shades or bowls in lighting fixtures having:

Regarding claim 1, a housing (see fig. 2); a plurality of bulbs units (20) spaced within the housing (see fig. 2); and a shield or shade (18) connected to the housing (fig. 2), for inhibiting access to the plurality of light bulb units (20).

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 2-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over White ('358) in view of Lavy (U.S.6,059,426).

White ('358) discloses the claimed invention except for a vent and a heat sensor.

Lavy ('426) discloses a lamp head incorporated with anti-combustion arrangement

Having:

Regarding claim 2, a vent area (611) for heated air from the lamp (52).

Regarding claim 3, a heat sensor (90) placed within the housing, for shutting off the light bulb units at a threshold temperature.

Regarding claim 5, the operating temperature of the light bulb (52) is generally less than 500 degrees F. or the high temperature burning zone 50.

Regarding claim 6, a tilt switch for shutting off the light bulb (52) when the housing is moved from a specified orientation.

Art Unit: 2875

It would have been obvious to one of ordinary skill in the art at the time the invention was made to utilize the device for suspending shades or bowls in lighting fixtures of White ('358) with the vent and heat sensor disclosed by Lavy ('426) for the benefit and advantage to provide a lamp head incorporated with an anti-combustion arrangement which can allow air circulation and ventilation within the high temperature burning zone of the lamp and thus the heat generated therearound is reduced to a safe condition. In addition, the heat sensor which is set to react below the combustion temperature of fabric or clothes will turn off the halogen light source to cease heat generating before the fabric object starting to combust.

Allowable Subject Matter

5. Claim 4 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
6. The following is a statement of reasons for the indication of allowable subject matter: The prior art of record neither teach nor suggest the plurality of light bulb units which are HALOPIN brand units manufactured by OSRAM.
